

Contemporary Lever

Operators

The Contemporary lever operator is a low-profile lever-style operator that gives you more options for your window hardware. The sleek design and 4-position locking option is different than any other operator on the market. It is available in left or right-hand models for casement and all operators are standard stainless steel to reduce SKUs. This operator is not sealed and must be used in combination with sash locking systems for security.

PRODUCT HIGHLIGHTS

- Recommended for wood.
- Simple movement of the lever to open and close the window
- Easy slide button release allows the window to be secured in 4 positions (closed, 35, 70, and 105 degrees)
- Sash is secured in the 4 positions by the locking button
- Fits most existing casement and awning window designs and can be used with common lock and hinge systems' technical specifications
- To open the window the lock button should be moved to the left to release the locking mechanism as the handle is pulled to the left
- To close the window move the lock button to the left to disengage the lock and hold while pushing the handle to the right into the closed position and releasing the lock button
- Materials: stainless steel arms, painted zinc escutcheon and handle
