### Hybrid Lock System

AmesburyTruth™ is pleased to present the new Hybrid Lock System. Our Product team has developed this unique hardware system for single, double hung, and sliding windows.

The New Hybrid Lock is a composite style lock system where the housing is made of high grade impact composite materials with a die casted handle and cam. The combination of these materials give this lock series the ability to obtain higher structural ratings.

This lock series was designed to provide window manufacturers a high quality, low cost product while maintaining superior aesthetics.

Hybrid Lock System

### Key Features & Benefits

**Sleek modern aesthetics**

**Minimized overall height (.700")**

- Egress friendly

**Simple design**
