

Maxim[®] Hinges

Hinges

Maxim system exceeds maximum expectations at every turn. The three components are engineered together to address the unique needs of the larger casement window. Designed as an integrated system, Maxim is attractive, easy to operate, and the highest performing window available while reducing manufacturing costs

When you are in need of venting a large casement window, our #14.97 washability casement hinge, in combination with our Maxim dual arm operator, is just the answer. Maxim casement hinges vent large casement windows (up to 40" x 84") and provide 1.5" more washability than the 10" casement hinges for easier cleaning from the inside. An adjustment feature built into the hinge allows for simple realignment.
