

## Pegasus Operator/Lock

### Locks

Pegasus consolidates the window operator, lock, and limit device into one mechanism. Pegasus fits in with existing window designs and uses common lock bars, guides, keepers and two bar hinges. Intended for placement on the side jamb, this hardware solution appeals to a simple, clean aesthetic with visibly less window hardware. Pegasus is a cost-effective solution for many modern, commercial casement and awning windows requiring F2006 safety standard compliance.

Pegasus is a patented commercial product that combines three functions into one. With an intuitive 180° operation of the handle, a user can open and close a window, lock and unlock the window, and have the sash secured with a limited opening of 4" or less. This innovative product in conjunction with our compression seals and hinge technology provide superior performance. It is a cost-effective solution for tilt & turn systems in many commercial applications.

### PRODUCT HIGHLIGHTS

- Recommended for: aluminum, composite, and vinyl
- Simple operation with one action
- Fits existing window designs and uses Maxim® locking system components
- Provides inventory savings
- Non-handed, removable handle and cover
- Meets F2006 safety standards
