

ADVANCED DESIGN MULTI-POINT LOCK INTUITIVE OPERATION EXCEPTIONAL PERFORMANCE

Upgrade hinged patio doors with a intelligent locking platform engineered for performance and ease of use. This intuitive system enhances security, improves sealing, and delivers smooth, reliable operation, preventing panel bowing and warping over time.

Auto-Firing latches engage automatically to provide consistent compression and improved door alignment. For larger doors an optional 5-point locking configuration adds head and sill shoot bolts for enhanced security, structural integrity, and long-term durability.

Customizable lock sizing simplifies installation across a range of panel heights, while domestic manufacturing helps reduce lead times, lower inventory demands, and increase flexibility for evolving customer needs.

XCORE HINGED DOOR MULTI-POINT LOCK

Independent Deadbolt ("babysitter" feature) - Simple twist of the thumb turn and the dead bolt is locked.

Easy reversible latches - Allows for lock to either be right or left-handed with a simple pull and twist – no tool required.

Anti-Cut-Through Pin – Designed into the deadbolt to resist sawing or cutting, providing enhanced protection against forced entry.

Anti-Slam - Prevents damage to the lock, door, floor, and frame enhancing user experience and preventing accidental misuse.

Wear-Resistant Strips – Positioned on all latches ensures decorative strikes are not damaged with door cycling.

ADDITIONAL FEATURES

Auto-Fire Latch - With intuitive operation, the auto-fire latches engage automatically when the door is closed to help protect against air and water infiltration while minimizing panel bowing and warping.

5 Point Lock Option with Auto Latch - Enhances security with a simple lift of the handle, activating both the head and sill shoot bolts.

Active/Inactive Communication - Ensures double doors lock securely with intuitive built-in mechanical communication between both active and inactive locks. The active handleset will feature a thumb turn and key cylinder giving the user a visual cue to understand which door is primary.

Additional Locking Types - A range of locking types – including rhino, tongue, roller, and shoot options – provides flexibility across multiple price points, each designed for specific performance requirements.

Backset Sizes - Available in multiple depths to fit a wide range of door stiles.

Coastal Protection - Provides the needed corrosion resistance in extreme environments.

Concealed Multi-Point Option - Coming soon.
