

Engineered Solutions. Trusted Results.

EXTRUSIONS

Custom

Helping customers is the backbone of our success. We are experts in extrusion design, material selection, engineering, and manufacturing. If you are looking for a unique solution or just starting to sketch out your plans, you are in the right place!

Our engineers have decades of experience and start by defining the project scope to get a solid understanding of your product needs. Expect questions like: how and where will the product be used, expected tolerances, reactions to outdoor/chemical elements, are there any mating parts, performance expectations? You get the idea – rest assured we have you covered.

We design, cut tools and manufacture everything in-house, which allows us to produce your products timely and efficiently. We have been working together with customers in the following industries:

- Fenestration (Window & Doors)
- Shipping Protection
- Office Furniture
- Building Materials

To kick things off, fill out [this form](#), giving us a quick overview of your project, and we will have one of our design engineers reach out to schedule a virtual meeting with you!
