LOCKS

P3000 Passive

This passive multi-point lock system is a perfect solution for today's consumer. The system is oriented with the thumb-turn above the handle, more similar to the standard front entry door configurations today. In addition, the dead-bolt operates independently from the other locking points, allowing a user to secure the door when unfamiliar with MPL technology. The mis-use device is buried within the gearing mechanism, eliminating protruding buttons and the damage they can cause on strike plates.

This system incorporates a pull and twist latch design and is constructed of corrosion resistant materials throughout. We offer standard configurations and can easily customize to best fit your application.

product highlights

- Backset options = 35mm, 45mm & 60mm
- Eurogroove = 16mm & 20mm
- Spindle = 8mm
- Anti-slam mechanism built into gearbox to prevent damage on strike plates
- Uses standard 5-pin American style key cylinder
- Handle/thumb-turn spacing = 92mm
- Locking features = rhino hook, tongue, rollers & shoot tips
- Dead-bolt operates independently from other locking points
- Dead-bolt throw = 1"
- Shoot tip throw = 1"
- Passive MPL Lock has a direct communication with the active MPL Lock
