NAILING FIN

Hinged PP1219

Low cost post industrial reclaimed PVC material with processing additives for stability.

Nailing fins are set back from the outer edge of the window frame and have fastener holes.

The purpose of nailing fins is to secure the window to the wall sheathing and hold it in place while the shims and screws are being installed. Fins also work in conjunction with flashing and a weather resistant barrier to help prevent water and air infiltration.

product highlights

- Recommended for: vinyl and wood
- 1.5" folding nail fin with holes punched every 3.5"
- Hinge feature allows the fin to be shipped flat to the jambs and then folded into place for installation which reduces the window units overall size for lower shipping costs, reduced corner packaging requirements and lessens the chance for damage that can take place on fixed nail fins as units are moved around the jobsite - designed to fit 0.080" kerf
