

P3000 Active 3pt 2 Tongues

Locks

This active 3pt 2 tongues multi-point lock system is a perfect solution for today's consumer. The system is oriented with the thumb-turn above the handle, more similar to the standard front entry door configurations today. In addition, the dead-bolt operates independently from the other locking points, allowing a user to secure the door when unfamiliar with MPL technology. The misuse device is buried within the gearing mechanism, eliminating protruding buttons and the damage they can cause on strike plates.

This system incorporates a pull and twist latch design and is constructed of corrosion resistant materials throughout. We offer standard configurations and can easily customize to best fit your application.

AVAILABLE COLORS

Stainless
Steel

PRODUCT HIGHLIGHTS
